

Additional resources for the teacher

The teaching scenario could also be carried out in the classrooms if there is a computer with internet, Bluetooth connectivity and a video projector (ideally a laptop with a video projector) with the guidance of all groups from the teacher's video projector. The whole scenario with the implementation steps as well as information about the answers, the necessary hyperlinks to the activities and what else is needed for its completion are given inside the Power Point and at the bottom of it, in the notes.

The Computer Science lab is best case with groups being independent and autonomous using their own robotics package on a separate computer guided by the following link: <https://learningapps.org/watch?v=pjt5wvay323>

At the end, the groups present their results and talk about the changes they would like as well as the difficulties they faced.

For greater convenience teams could only have the necessary lego "blocks".
